Laser Welding Process with Monitoring Setup

Process Monitoring Software

Process Monitoring A new high resolution process monitoring system has been developed for laser welding process observation.

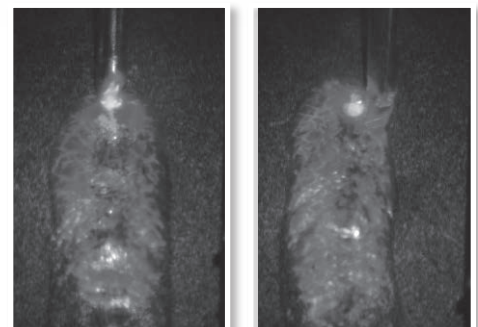

Monitoring of Laser Welding Fraunhofer has developed a high speed camera vision system that can record the welding process in high clarity in real-time and provide both image and video data from the process. This information is processed and calibrated with reference data based on pre-determined actual 'good' weld measurements. Using customized image processing software algorithms, it is possible to detect a number of common weld defects.

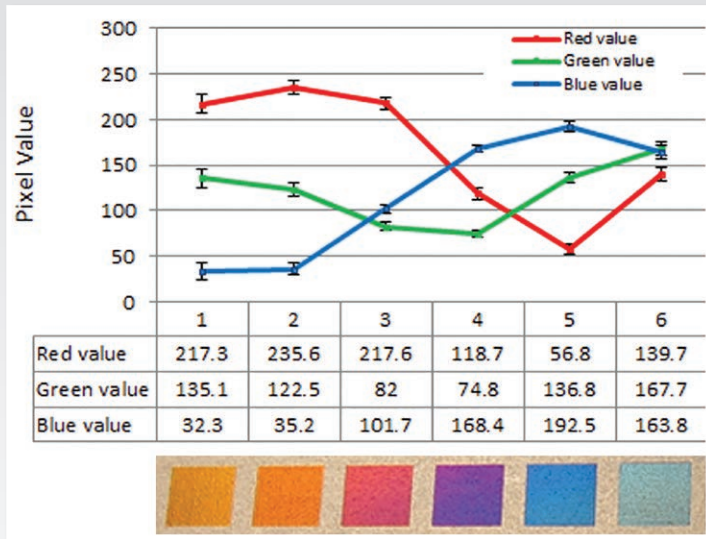

Process Monitoring System

TECHNICAL SPECIFICATIONS

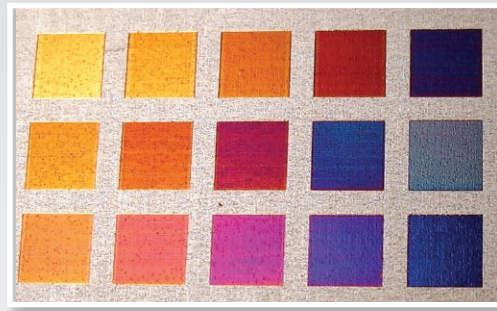

Description	Unit	Type/Value
Camera		CMOS
Full Resolution	pixels	1024 x 1024
System Type		High Speed Camera
FOV	mm x mm	4 x 8 @650 fps 6 x 10 @400 fps
Frame Rate	frames/sec	Up to 750
Exposure Time	ms	0.1 - 1000
Lens Mount		C-Mount
Illumination Source		Laser
Laser Type		Diode
Integrated Software		Graphical User Interface

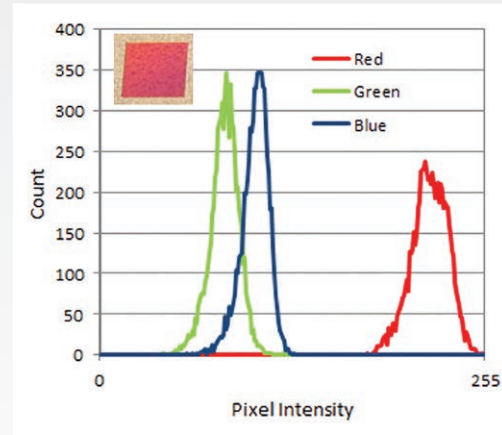

Laser Welding Process with Wire Correctly Aligned (left) and wire misalignment (right)

Measured RGB Histogram

Laser Color Marking Lasers can be used to create permanent color marking on a metal surface. Laser color marking is based on surface oxidation and thin film effects and does not use any chemicals, coatings or tools. Different colors ranging from silver and gold to blue and green can be created usually on materials such as stainless steel or titanium.

To create uniform and high quality marks, the laser must have stable high beam quality and should allow independent pulse parameter adjustment. Only changes in laser process parameters are required for changing colors.

The laser color marking process can also be monitored. Results have shown that our camera based system can measure the laser produced color mark accurately against the RGB model.

Color / value	Orange	Red-Orange	Red	Purple	Blue	Grey
R	217	235	217	118	56	139
G	135	122	82	74	136	167
B	32	35	101	168	192	163

Standard Color RGB Values

ADVANTAGES

- No coatings or chemicals
- No tools or dies
- High contrast, high accuracy and high quality coloring
- Flexible marking process using digital image
- Different colors by changing the laser parameters

APPLICATIONS

- Color marking of metals
- Product marking and decoration
- High contrast marking
- Consumer products
- Tool marking
